Common Pain Points & Solutions We See

SAP Signavio surfaces hidden process debt — bridging the gap between how leadership thinks a business runs and how it actually operates.

Lack of Process Transparency

Organizations rely on outdated docs and tribal knowledge. Signavio Process Manager creates a digital twin of your processes — exposing manual workarounds and shadow processes invisible to leadership.

Process Inefficiency & High Costs

High cycle times and rework loops drain value. Process Intelligence delivers 1,000+ built-in metrics to pinpoint bottlenecks, idle time, and automation opportunities.

Compliance & Risk Management

Regulatory compliance (GDPR, SOX) is often reactive and audit-driven. Process Governance embeds compliance into daily workflows, flagging deviations in real-time — turning audits into a continuous safety net.

Poor Customer & Service Experience

Customers feel friction, but internal teams can't see which hand-offs cause it. Journey Modeler connects the external customer journey to internal processes — revealing exactly which bottleneck is hurting experience.

High Risk in ERP Migrations

Lifting and shifting broken processes into S/4HANA leads to costly failures. Signavio acts as the Control Tower — analyzing As-Is state, standardizing with SAP Best Practices, and simulating To-Be outcomes before a single line of code is written.

Use Case 01

Customer

Transforming Accounts Payable through Process Mining

A leading player in renewable energies, the client develops, finances, constructs, and manages renewable energy facilities for its own account and third parties. For North America, they produce 5.9GW of energy — primarily from wind, followed by solar.

With plans to migrate from SAP ECC to S/4 HANA and update their Vendor Invoice Management (VIM) system, the company needed deep visibility into how their Accounts Payable (AP) processes currently operate — enabling workflow adjustments before migration for a seamless transition.

\$360K of Value

Locked AP process value discovered in a single one-hour value identification session.

\$7.2B Net Invoice Value

Total value of invoices analyzed across one year of transactional transactional data.

Challenges

- No real-time visibility into AP thus impossible to identify bottlenecks or deviations
- Team used manual intervention rather than proper configuring VIM to handle
- No method to quantify/qualify exceptions, manual effort and re-work

Why Signavio with IMPRIVA?

- Ability to quickly gain insights and knowledge thru analysis and user enablement
- End-to-end overview of process flows, performance indicators and recommendations for improvements
- Powerful visualizations of variants produced by Impriva highlighted efficiency opportunities

Outcomes

- Matched SAP best practices with actuals and harmonized AP opportunities across the enterprise
- Reduced locked AP processes resulting in cost savings
- Documented new and improved Accounts Payable business processes and established routine checks for improvements

“The implementation of SAP Signavio Process Intelligence gave us unprecedented visibility into our AP workflows — transforming how we identify inefficiencies and drive continuous improvement.”
